Megawide Precast unit increases capacity for infrastructure, supply-and-build contracts

(L-R: Megawide Chief Human Resources Officer Maria Belinda Morales, Megawide Chief Operating Officer for EPC Frederick

applying a methodology that enables faster curing time for its precast elements, able to manufacture higher production loads within a shorter period.

Producing precast components in a factory setting ensures higher standardization and lessens the need for manpower by removing conventional works. It is also more environmentally-friendly compared with traditional methods, as it reduces the use of lumber for on-site casting
